## Trough Cleaner Speedy

**Thorough and fast cleaning of all feed troughs**

Food residues in the trough provide a good breeding ground for mould and bacteria. The removal of these residues is important for optimum feed hygiene. Manual cleaning with bucket or shovel is not only time-consuming, but there are always residues remaining in the corners.

Trough Cleanser Speedy always sees to it that feed rations are fresh. It is coupled to the gun of a high-pressure cleaner and held into the feed trough. Depending on the size of the high-pressure cleaner, the output is up to 400

litres per minute. The attachment sucks up both liquids and dry feed. Extracted feed residues can be discharged into the manure. The trough is then cleaned with water by simply switching over at the lance.

### In brief:

- Simply couple to the high-pressure cleaner
- Residue-free suction of dry and liquid media from troughs and containers
- Fast switchover to rinse mode
- Significant improvement of feed hygiene, better feed intake
